UI Design

Merchandise Catalog App

The product goal is to create an online catalog app that helps small businesses showcase their merchandise digitally, eliminating the need for paper catalogs and reducing mailing costs.

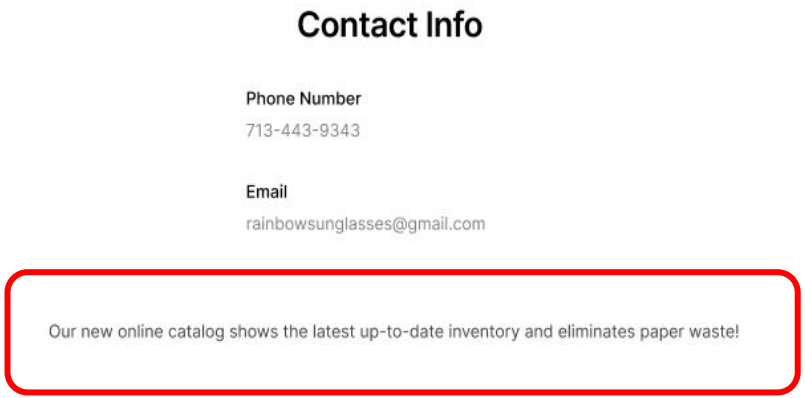
Inclusivity Heuristics Justifications - IH#1

Explain (to Users) the Benefits of Using New and Existing Features



Small businesses typically ship out one physical catalog (booklet/pamphlet) each year. Information become outdated with time.

- Now both the user and business owner will now be on the same page.
- Also reduces paper waste!

Inclusivity Heuristics Justifications - IH#2

Explain (to Users) the Costs of Using New and Existing Features

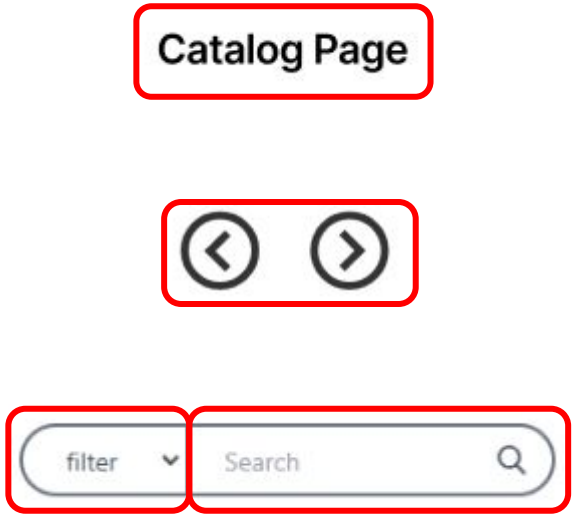
	#2033	$22.50 / dz
	#1800	$26.00 / dz

On the Catalog Page, the “search” and “category” tools lets users know they can skip to desired products without searching page by page.

This helps users understand the time cost of narrowing down the number of products they see.

Inclusivity Heuristics Justifications - IH#3

Let Users Gather as Much Information as They Want, and No More Than They Want

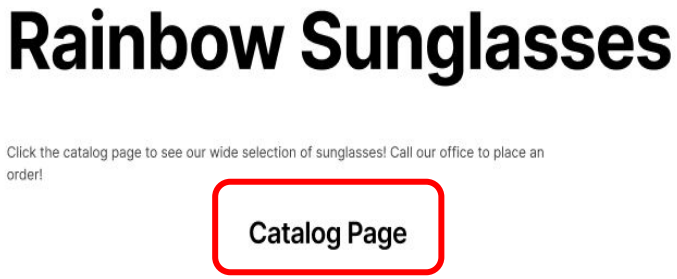


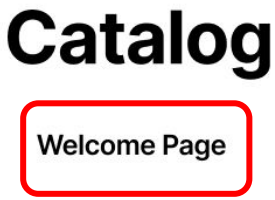
The “catalog page” navigation button on the “Welcome Page” lets users decide if and when they want to explore products (perhaps they simply want the store’s contact info).

Users can immediately gather information on specific products right away with the “search” function or browse at their own pace using “next” buttons.

Inclusivity Heuristics Justifications - IH#4

Keep Familiar Features Available





A simple navigation bar is consistent across both the Welcome Page and Catalog Page.

This familiar layout allows users to easily move between pages and feel comfortable using the online catalog without getting lost.

Inclusivity Heuristics Justifications - IH#5

Make Undo/Redo and Backtracking Available

On the Catalog Page, a “clear filter” option lets users undo any filters they apply.

A “back” button is available so users can easily return to previous pages.

Inclusivity Heuristics Justifications - IH#6

Provide an Explicit Path through the Task

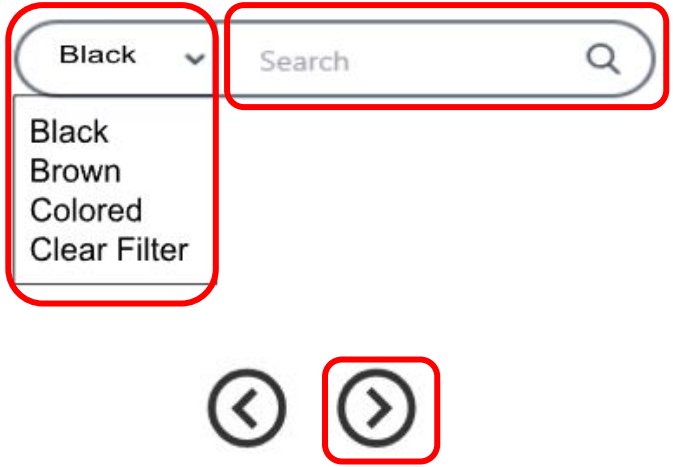
A short message on the Welcome Page gives users a clear, step-by-step path to purchase the products.

They are to browse the Catalog Page and follow the “contact info” to place an order.

Inclusivity Heuristics Justifications - IH#7

Provide Ways to Try Out Different Approaches



Users are given multiple options to view the catalog:

- scroll through all items page by page.
- use the “search” bar to look for something specific.
- apply the “category” filter to narrow down choices.

Inclusivity Heuristics Justifications - IH#8

Encourage Tinkerers to Tinker Mindfully

Including the “ Clear Filter” option encourages users to experiment with the filter tool.

This allows users to try out different ways to browse products while keeping control of their choices.
